

Project: College Football Website

Problem to Solve:

It can be hard to keep track of various college football games and stats all in one place, especially on game day! The College Football website will provide game information and other college football stats all in one place that is easy to use.

Why?

I am hoping to make it easier to keep track of all of college football so that everyone can more easily enjoy and keep up with the game.

Audience:

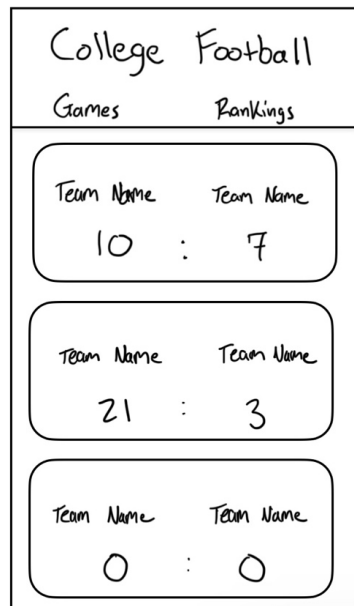

The audience will be all those who love college football and keep up with the latest games and other stats.

Major Functions:

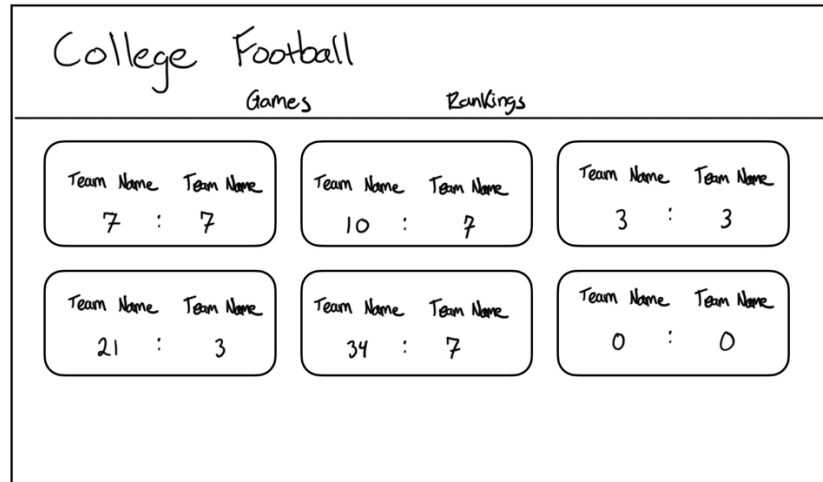

- Recent game results and future games filtered by the week
 - Allow the ability to lock in a prediction on what the outcome of future games will be
 - Clicking on a game will show more information about the game
- Team information including viewing the team roster
 - Clicking on a player will show more information about that player
- Get the latest college football rankings
 - Show the latest predictions for what the college football playoffs will look like

Wireframes:

- Desktop

○

Data Sources:

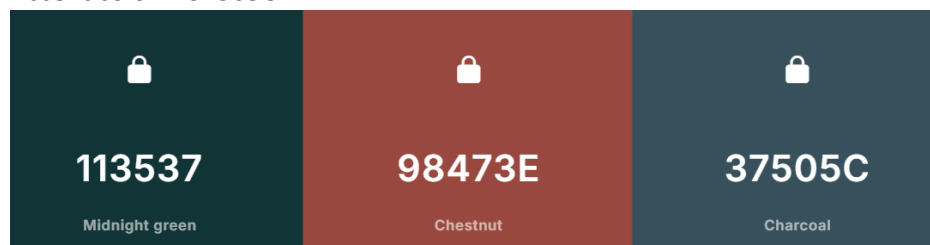

- External API
 - <https://api.collegefootballdata.com/api/docs/?url=/api-docs.json#/>

Initial Module List:

- Games module
 - Displays information about past and future college football games
- Teams module
 - Displays information about college football teams
- Players module
 - Displays information about college football players
- Rankings module
 - Displays information about college football rankings
- Utilities module
 - For fetch api calls

Styling:

- Colors:
 - Primary color: #113537
 - Secondary color: #98473E
 - Accent color: #37505C

- Typography:

- Header font: **Oswald**
- Body font: Inter

Schedule:

- Week 1
 - Setup utility function for making api calls
 - Complete the games module. The landing page will show the games for the current week. Clicking on a game will show more information about the game.
- Week 2
 - Complete the Teams module. Clicking on a team will show more information about that team
 - Complete the rankings module. This view will show the top 25 teams
- Week 3
 - Complete the players module. Clicking on a player will show more information about that player
 - Finishing touches. Complete whatever remains so that project is dev complete.
